Dangerous Grimorous
Javascript for Image Swaps in the Primary Navigation

Copy and paste this code into the <head> section of your html file:

```
<script> function changeImage(id,img)
  {
          document.getElementById(id).src = "images/"+img+".jpg";
  }
</script>
```

Add this coding pattern for each image swap:

```
<li><a href="filename.html"><img src="images/imagename.jpg" width="160" height="31"
alt="description of image" id="IDname" onmouseover="changeImage('IDname','IDname_over');"
onmouseout="changeImage('IDname','IDname')"></a></li>
```

Example:

```
<li><a href="index.html"><img src="images/home.jpg" width="99" height="31" alt="home button"
id="home" onmouseover="changeImage('home','home_over');"
onmouseout="changeImage('home','home')"></a></li>
```

```
<li><a href="scouting.html"><img src="images/scouting.jpg" width="130" height="31" alt="scouting
button" id="scouting" onmouseover="changeImage('scouting','scouting_over');"
onmouseout="changeImage('scouting','scouting')"></a></li>
```

Note: All your button images will have the same image file compression. Consider whether you need to amend .jpg to **.png** or **.gif** in your .html file
